following analysis made by the United States De-partment of Agriculture from beets grown near sugar in beets, per cent., 21.7; sugar in juice, per cent., 24.1; coefficient of purity, 83.1.

Experience has demonstrated that excellent asparagus, onions and celery can be grown, the tule lands being very similar to those of the Sacramento and San Joaquin Valleys of California, where such vegetables are so successfully cultivated. Throughout the world the reclaimed marshlands are the best suited for the highest development of dairy inter-

There is no question that this will become a sugar beet producing section and that a number of factories will be built and operated with the development

Board of Horticulture, gives it as his opinion that the footbill lands are specially adapted to apple

Cultivation of the potato has passed beyond the experimental stage, the sandy loam of the uplands

took the premium at the New Orn being peculiarly adapted to its growth.

All landowners being required Holdings Must to sell their excess holdings, there Be Bold is a targe area of good land for sale

at reasonable figures, prices ranging from about \$15 to \$35 for unimproved, and \$20 to \$50 per acre for improved land. Land adjacent to the principal towns commands higher prices. The purchaser pays for the water right at a cost of about \$18 per acre to be paid for in ten equal annual installments without interest. This amounts to less than the ordinary annual rental paid private ditch companies. Some of the irrigators of Klamath Val-ley (and they are the most prosperous farmers) have already paid out to such companies for water \$60 per acre and cwn no water. All of these companies have been purchased by the Government and included in

No public lands will be open for settlement for

several years. The upland soil is mainly a rich sandy Climate loam of great uniformity and composed largely of disintegrated and croded lava with an admixture of volcanie ash and diatomaceous earth, the latter material of plant ori-gin, formed in the bottom of the ancient sea which covered the greater part of the Great Basin, and of which Klamath Valley is a northwesterly extension. Such soil, characteristic of many of the richest agricultural sections of the world, including much of Italy and the great plains of India, is extremely fertile, and of lasting productiveness. The lake and tule lands are made up of a volcanic soil containing much organic matter, a vegetable accumulation of ages, and is of a peatty nature.

The climate is extremely healthful and not severe. There is rarely any Winter weather before the latter part of December, and but little zero weather during the entire Winter. The annual precipitation is about fifteen inches, with little rain during the Summer

The Klamath Project is the name that has been applied to the reclama-tion of about 100,000 acres of land now Klamath Project under the overflow of the Klamath

River and of Lower Klamath Lake and Tule Lake and the irrigation of about 1:0,000 acres of valley land adjacent to the Klamath River, along the course of Lost River and the tributary portion of the great plateau lying chiefly in Klamath County, Oregon, but also embracing a part of Siskiyou and Modoc Counties, California, a total area of 200,000 acres

The Project embraces the construction of a very great mileage of canals, laterals and drainage canals and will have its principal source in Upper Klamath Lake. Clear Lake and Horsefly are reservoir sites where flood water will be impounded and utilized for irrigation of land included in the upper portion of the Project.

Work on the main canal was started in the Spring of 1906 and the first unit of nine miles is now com-pleted. About 13,000 acres of land will be irrigated from the first unit, the laterals for which are being constructed under the supervision of the engineers having charge of the Project. By far the largest proportion of the land under the first unit is now in sagebrush and must be cleared and broken in time for crops in the Spring of 1908. Work on the second unit is being done by the Government and embraces nineteen miles of main canal and twenty-six miles of laterals to furnish water to about 20,000 additional acres of land. Work on this unit will be prosecuted as rapidly as possible.

Nearly one-half of the area to be irrigated is now under water to a depth of from one to fifteen feet and will be reclaimed by a system of drainage to lower the level of the rivers and lakes. A large part of the swamp land and practically all of the valley land in the Klamath Basin are held in private ownership and some in very large tracts which must be sold in tracts of 160 acres or less under the regulations governing the perfection of a water-right,

KLAMATH'S GREATEST NEED

For its development and prosperity the Klamath Basin must have people, and the right kind of people at that. Its great need is intelli-

gent, practical farmers, who understand the meaning of intensified and diversified farming; men who will buy land, not for speculative purposes, but with the idea of clearing off the sagebrush and making permanent and comfortable homes. Such men are bound to succeed. There is room for thousands of them.

Sugar beets have been grown experimentally throughout the Klamath Valley. The percentage of sugar is high, as will be noted from the

of the industry.

All kinds of fruit adapted to the temperate zone thrive here—apples, peaches, pears, cherries, prunes, plums, apricots and nectarines do well, and small fruits bear abundantly and of excellent quality. There are a great many small orchards throughout the basin that prove the adaptability of the region to the profitable production of fruit.

E. L. Smith, former president of the Oregon State

producing them in great abundance,

Klamath County wheat, grown without irrigation, The most important forage crop is alfalfa, the soil

MILLS ADDITION LOTS are Advancing in Value

When blocks in Mills Addition were offered at bargain prices a number of shrewd inves-tors bought; since that time values have increased materially.

These Lots are Bargain Buys at present prices, and there is every reason to anticipate an advance in prices. Remember these lots are FIFTY feet in width and ONE HUNDRED AND TWENTY FEET deep-more than double the area of most town lots offered to investors.
